## DISSERTATION DESCRIPTION

**Title:** “Genetic Epistemology in Kant’s Psychological Philosophy”

**Abstract:** My dissertation examines how Kant understands human agency and its role in cognitive development. Against the widespread view that the forms of intuition and the categories are innate fixtures of the mind, I argue that Kant is an anti-nativist of a distinctive kind: space, time, and the categories are neither implanted by God nor preformed by nature, but produced by the mind’s own activity. The dissertation proceeds through three studies, each pairing Kant with an interlocutor on one form of *a priori* cognition: Berkeley on space, Locke on time, and Leibniz on the categories. Together, these studies develop a *genetic* model of the *a priori*, which explains how a mind given only its basic capacities comes to acquire even the most fundamental representations. On this view, the human mind is defined less by endowment than by the agency through which representations become its own.
